

Customer Onboarding Journey Map

A **persona-based** map of the onboarding journey — each swimlane is a **user**: what they do, in order, with **= shared** steps flagged so you build them once. The team grows left→right (vendors, drivers & foremen don't come in on day one). **Answer the discovery questions below** to tailor the journey to a customer — the lanes that don't apply drop away.

Training Modules

Build each module once and assign it to the personas who need it. Expand a module to see what it should cover — this list tailors to the answers above.

M1

Account & Master Data

Stand up the company and load everything Tread needs before any work is built.

Admin

WHAT TO TRAIN

- Create the company; set hierarchy (flat vs parent/child) — split only to sequester data
- Invite & role users: dispatchers, billing, drivers, foremen
- Upload master data: customers, sites (with geofences), equipment/trucks, materials
- Set rates (customer, vendor, driver) & key feature flags
- Clean up / deactivate ex-employee logins

M2

Projects (Jobs) & Rates

Build the recurring work that daily orders are generated from.

Admin Dispatcher

WHAT TO TRAIN

- Create a Project (Job) — recurring work
- Project (Job) External ID vs Dispatch # (where POs live)
- Default pickup/dropoff sites
- Phase codes & phase-code defaults (construction)
- Decide loads vs running vs tons up front

M3

Dispatching

Turn a Project (Job) into a daily Order and get it to drivers/vendors.

Dispatcher Foreman

WHAT TO TRAIN

- Create an Order from a Project (Job); editing the Order vs a Job (Tread)
- Assign drivers or vendors; bulk assign; Send all
- Job (Tread) quantity UOM (loads / running / tons)
- Live map, breadcrumbs & order metrics; communicate changes
- Reassign before a Job (Tread) starts (dispatches can't be edited once received)

M4

Vendor Onboarding

Get sub-haulers and their drivers onto Tread (the customer drives this).

Admin Dispatcher Vendor

WHAT TO TRAIN

- Add vendors as master data (triggers their invite) — from PRODUCTION, not Sandbox
- Send invites: customer-sent vs Tread-on-behalf; bulk-upload large rosters
- Use the email/SMS templates; go out days before any on-site
- Vendor accepts, downloads app, sets up trucks & drivers, shares the Driver Guide
- Sub-dispatch: accept → assign to own drivers → Send all

M5

Driver App

The in-cab workflow — identical for internal and vendor drivers (build once).

Internal Driver Vendor's Driver

WHAT TO TRAIN

- Download the app, phone sign-in, location permissions
- Accept → Start → End a Job (Tread)
- Capture scale tickets (OCR)
- Add timesheets & submit hours
- Capture the right phase code on multi-phase Jobs (Treads)

M6

Foreman (Field)

The job-site lead's mobile workflow (construction).

Foreman

WHAT TO TRAIN

- Create Orders from the mobile order form
- Assign the foreman at the ORDER level (sees only their own orders)
- View Job (Tread) progress on site
- Approve driver hours (Time Logs / shifts)
- Enter phase code at approval (no hard gate yet — SOP + exception report)

M7

Approvals

Review and approve the work before it bills.

Billing Foreman

WHAT TO TRAIN

- Ticket review (AI ticket review + chaser)
- Load confirmation
- Hour approval: shift vs Job (Tread) vs phase code
- Approve against the right rate (vendor rate vs driver rate)

M8

Billing & Settlements

Turn approved work into payables, receivables and settlements.

Billing

WHAT TO TRAIN

- Payable & receivable invoices
- Add-ons & fuel surcharge (FSC)
- Create payable & receivable settlements; pre-build vendor payables
- Settlement (weekly) vs itemized (per job)

M9

Reports & Exports

Get clean data out for billing, payroll and performance.

Billing Admin

WHAT TO TRAIN

- Reports tab: P&L, driver payroll, payables, job-cost
- Export tickets / hours / loads to CSV / PDF
- DataVinci-first reporting; Omni embedded reports
- Know which export feeds payroll / accounting / ERP
